Notes for BeautifulSoup Methods & Attributes

You can apply these two methods to either initialise soup object or a tag object

- find() - searches for the first matching tag and returns a tag object
- find_all() - searches for all the matching tags and returns a resultant object as a list

You can extract information from a tag object using these two attributes

- text - extracts the text of a tag object and returns a string
- contents - extracts the children of a tag and returns a list of tags and strings

Iterating

```
record = []

for i in result:
    date = i.find('strong').text[0:7] + ', 2017'
    lie = i.contents[1][1:-2]
    exp = i.find('a').text[1:-1]
    link = i.find('a')['href']

    record.append((date,lie,exp,link))
